

INFORMATION SYSTEMS IN HEALTH CARE

Presentation of projects

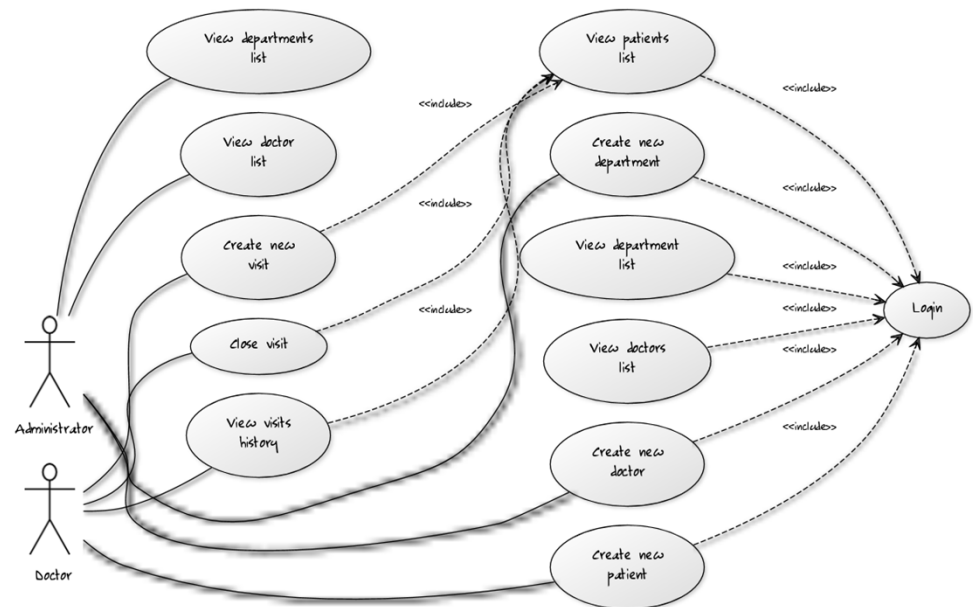

Requirements

Administrator

- log into the system
- create new department
- create new doctor
- view doctor list
- view departments list

Doctor

- log into the system
- create new patient
- create new visit
- close visit
- view patient list
- view visit history

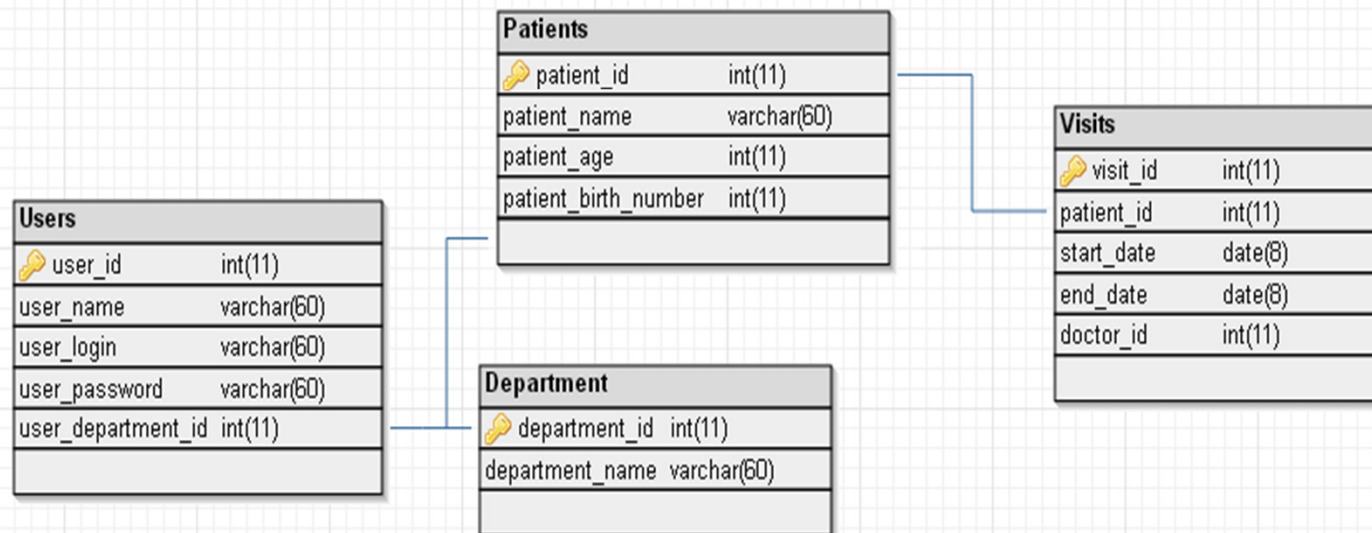

Part I: Analysis

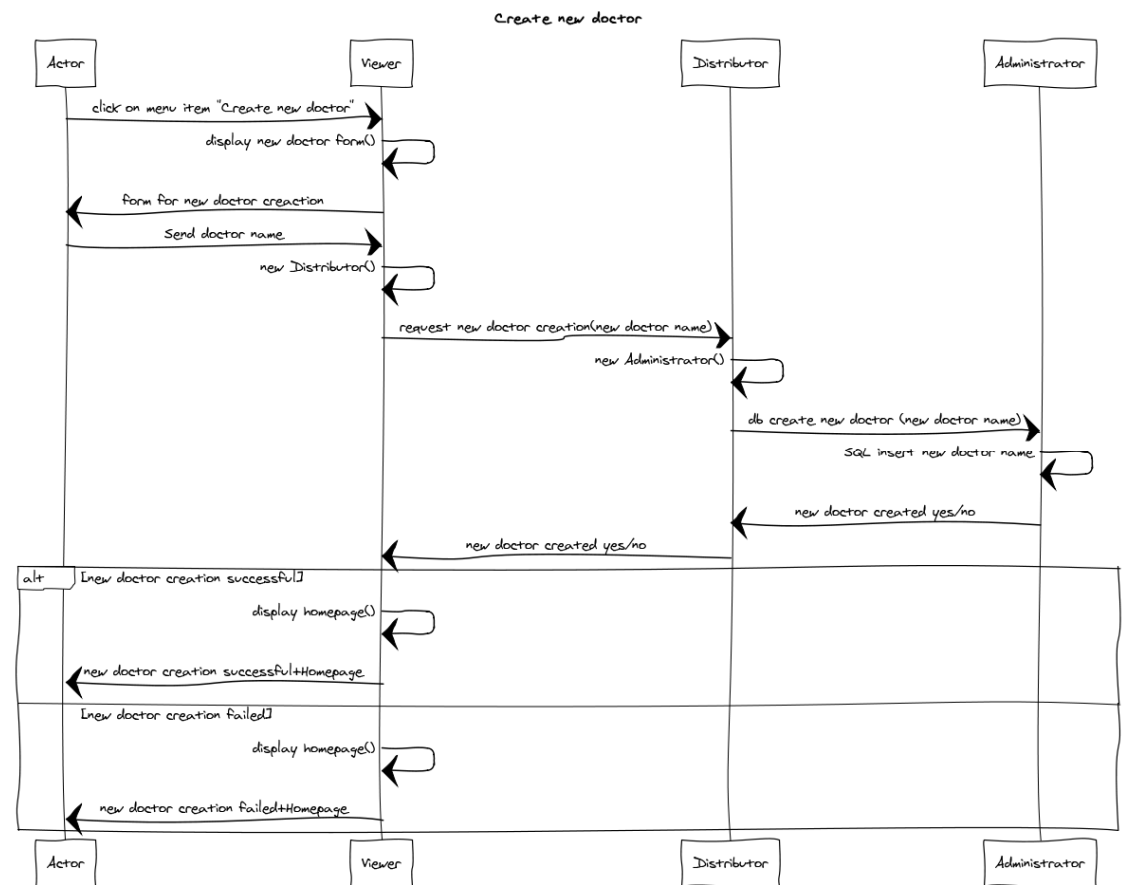

Database

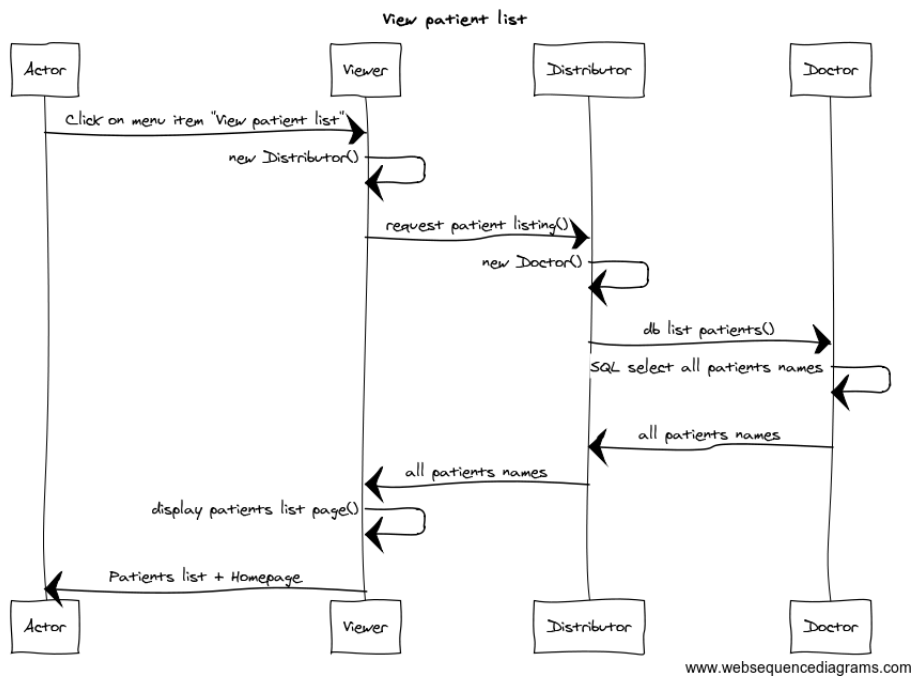

dbdsgr.appspot.com

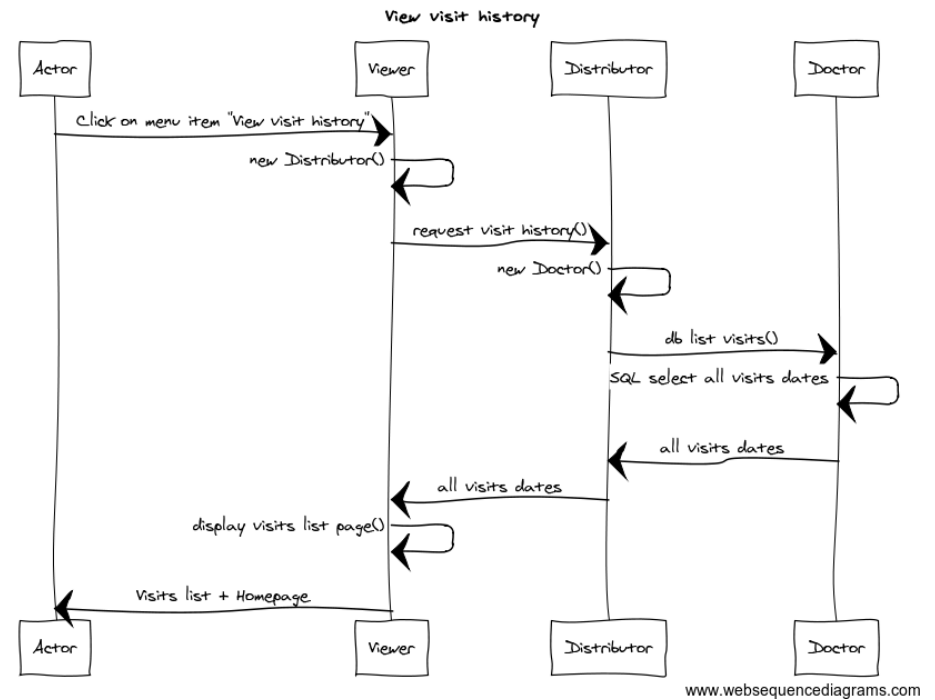

UML sequence diagram

- Create new doctor

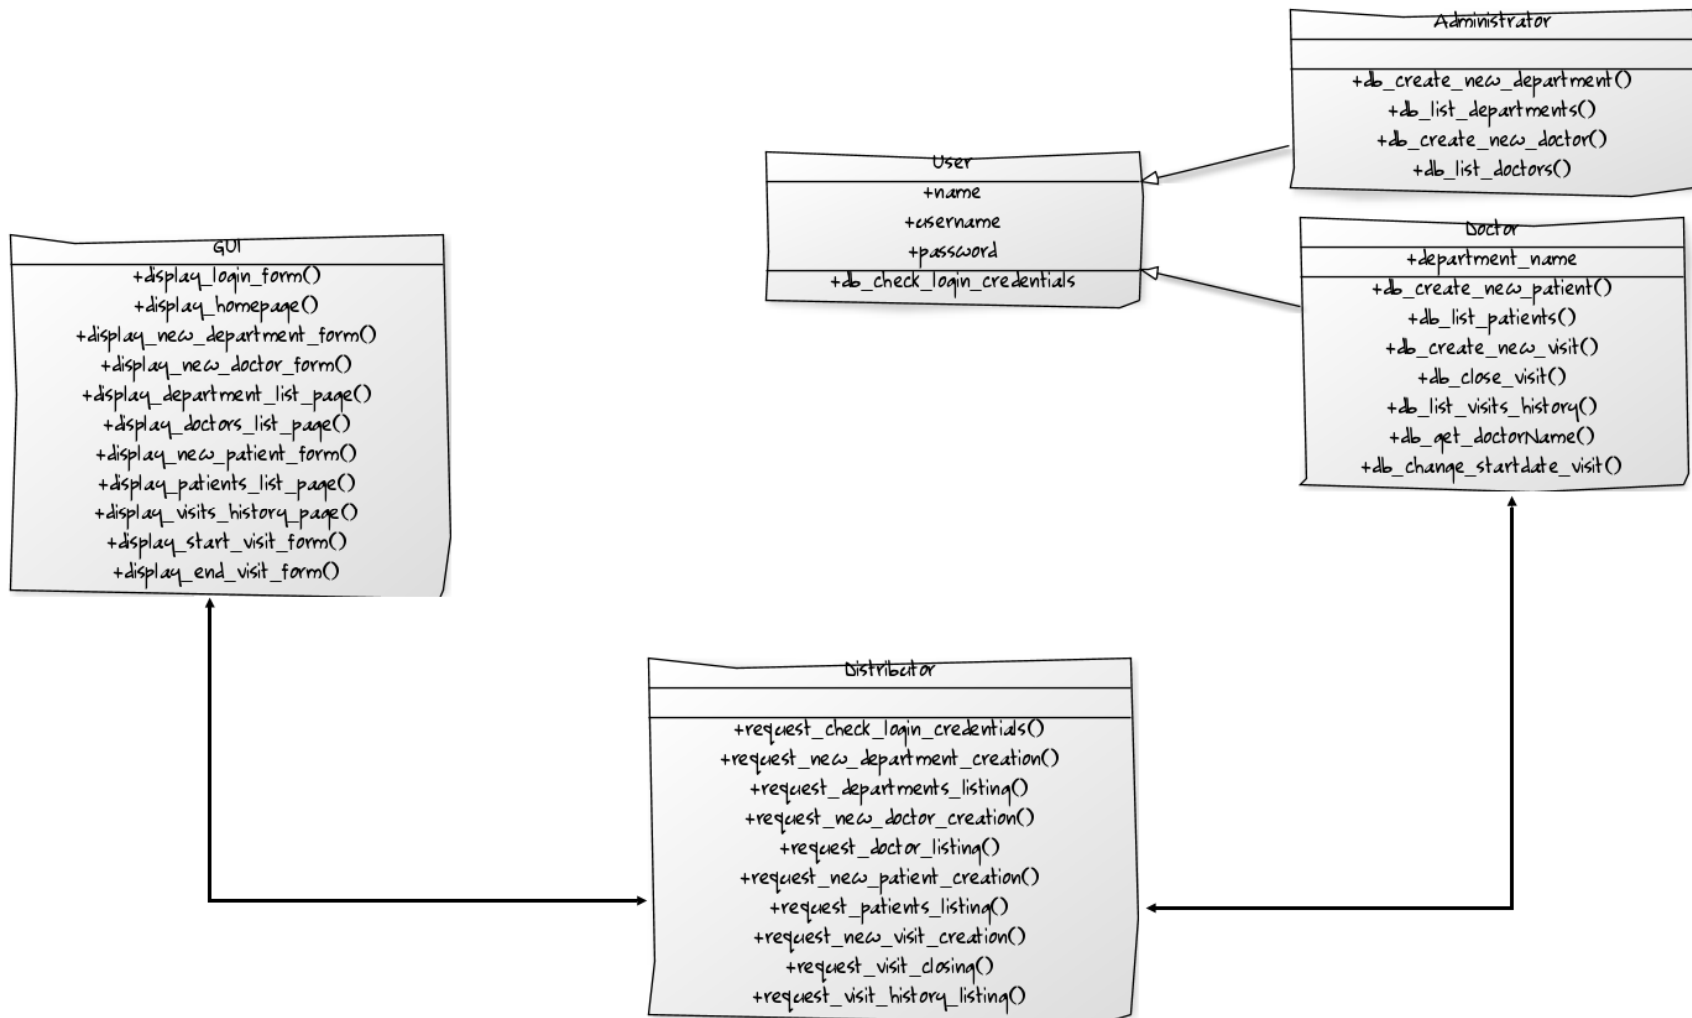

- View patient list

View visit history

Part II: Coding

- class.viewer
- class.doctor

```
<?php
    session_start();

    include("class.distributor.php");

    class viewer{
        function display_login_form(){
        function display_homepage($user_name, $user_department, $message){
        function display_new_department_form(){
        function display_departments_list_page($departments){
        function display_new_doctor_form(){
        function display_doctors_list_page($doctors){
        function display_new_patient_form(){
        function display_patient_list_page($patients){
        function display_visit_history_page($visits, $distrib){
        function display_start_visit_form($patient){
        function display_end_visit_form($patient, $vid){
```

```
1  <?php
2
3  class doctor extends user{
4
5      function db_create_new_patient($patient_name, $patient_age, $patient_birth_number){
23
24      function db_list_patients($id){
46
47      function db_create_new_visit($patient_id, $start_date, $doctor_id){
66
67      function db_list_visit_history(){
86
87      function db_close_visit($end_date, $visit_id){
107
108      function db_get_doctorName($id) {
127
128      function db_change_startdate_visit($start_date, $patient_id){
148      }
149
150  ?>
151
```

Part III: Testing

SQL queries for searching the following information:

- Name of the patient with the greatest number of visits

```
SELECT name from (SELECT COUNT( v.patient_id ) as liczba, p.patient_name as name
FROM Patients p, Visits v
WHERE p.patient_id = v.patient_id
GROUP BY v.patient_id
ORDER BY liczba DESC) res
LIMIT 1
```

```
SELECT name
FROM (
    SELECT COUNT( v.patient_id ) AS liczba, p.patient_name AS name
    FROM Patients p, Visits v
    WHERE p.patient_id = v.patient_id
    GROUP BY v.patient_id
    ORDER BY liczba DESC
)res
LIMIT 1
```

←T→	name
  	Dale Gwen

- Name of the doctor who was assigned to the patient with the longest visit duration

```
SELECT user_name Doctor_Name, MAX(end_date - start_date) as NAZWA from Visits v, user u
WHERE end_date is not null
AND end_date > start_date and u.user_id = v.doctor_id
GROUP BY v.visit_id
ORDER BY NAZWA desc
LIMIT 1
```

```
SELECT user_name Doctor_Name, MAX( end_date - start_date ) AS NAZWA
FROM Visits v, user u
WHERE end_date IS NOT NULL
AND end_date > start_date AND u.user_id = v.doctor_id GROUP BY v.visit_id ORDER BY NAZWA DESC LIMIT 1
```
